

BovaMag

MegaMin BovaMag is a medicated supplement that provides higher levels of magnesium with broad spectrum macro and trace minerals essential for sheep and cattle grazing lush green pastures, fodders, forages and winter cereals.

Supplementing with magnesium prior to and when grazing these feeds can assist mineral uptake and reduce risks associated with magnesium deficiency, such as grass tetany and milk fever. The inclusion of Bovatec® offers additional benefits of improved liveweight grains and feed conversion efficiency, making MegaMin BovaMag the ideal choice for supporting livestock health and productivity.

MegaMin BovaMag SWEET and SUPER SWEET contain a range of attractants to overcome the unpalatable nature of magnesium and enhance intake.

- Ideal for stock grazing lush green pastures, ryegrass, oats, winter cereals, or magnesium/calcium-deficient country.
- Can assist meat quality during high stress periods.
- ▶ Suitable for use during pre-calving, lambing, and weaning.
- Assists magnesium uptake and benefits livestock scouring on green feed.
- Helps reduce risks associated with magnesium deficiency, such as grass tetany and milk fever.
- Bovatec® promotes beneficial rumen bacteria for better rumen function, helping to improve feed conversion efficiency and daily weight gains.
- Bovatec[®] can increase dry matter intake, total rumination, and volatile fatty acid production.

Feeding Guide

Recommended daily intake is 20-30g/100kg body weight/day.

FEED RATE (g/day)

Cattle

100-150

Sheer

10-15

Commence feeding at higher intake levels 2-3 weeks prior to periods of high risk for grass tetany. Use in conjunction with other grass tetany management strategies. Initial consumption rates may be higher due to salt or mineral cravings.

Note: Supplementation rates will vary according to condition of livestock and state of pasture. For more information contact AgSolutions Australia on 1800 81 57 57.

WARNING: This product is for cattle and sheep only. Equines must not be allowed access to feeds containing Bovatec[®] as ingestion may be fatal. This product should not be fed more than 400mg lasalocid/head/day to lactating dairy cattle.

Suitable For

Stock grazing lush green pastures, ryegrass, oats, winter cereals, and magnesium/calcium-deficient country

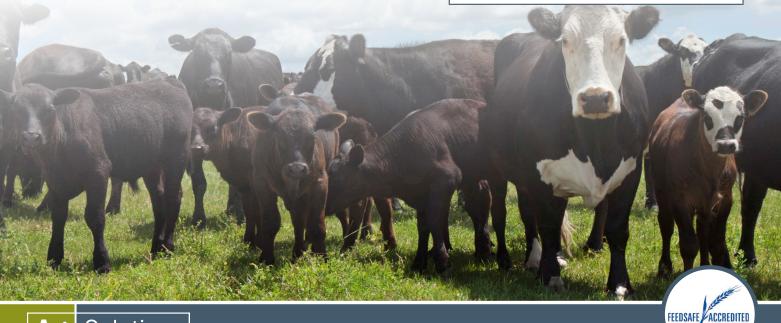

Lactating livestock, and during pre-calving, lambing and weaning

Stock at risk of scouring, grass tetany, milk fever, etc.
